

Amendments to the Specification

Amend paragraph 61 on page 10 as follows:

In the preferred embodiment, UV light assemblies 76 and the target rods 14 are fit onto the hood portion 12 as shown in FIGS. 9-12 and 17. Compression of the gasket ~~[[66]]~~ 68 around the endcap fitting ~~[[64]]~~-66 helps seal the UV light source 14 into the hood portion 12. The rigid reflector tube 62 helps provide resistance for screwing the endcaps 72, 74 onto the endcap fittings ~~[[64]]~~66, to form the compressive seal. The reflector tube 62 also forms a support for the shield 64 so that the shield 64 does not contact the UV light source 14 during maintenance, thereby protecting the UV light source 14 from breakage.
